

**Conformity and Emotional Control Scale KEKS* –
Presentation of a new self-report questionnaire for traffic psychological fitness to drive
assessment**

Bettina Schützhofer¹ und Rainer Banse²

¹sicher unterwegs – Verkehrspsychologische Untersuchungen GmbH

²Universität Bonn

The Conformity and Emotional Control Scale KEKS is a theory-based self-reporting inventory that measures social-emotional aspects of fitness to drive in adults and traffic maturity in adolescents. The workshop will present in detail the new approach to test development, the theoretical background of the three test scales and the test quality criteria. Furthermore, diagnostic questions for which the test is suitable will be presented on the basis of empirical study results and concrete case studies.
